Location: UCSF Medical Center (Parnassus)

## Fellowship Goals

The UCSF Chase-Bozic Hip and Knee Arthroplasty Fellowship is designed to provide fellows with a comprehensive and rigorous training in the evaluation and operative management of lower extremity arthroplasty problems. Our mission is to train surgeons to be compassionate and capable care providers, with the knowledge and skills to care for patients presenting along a broad spectrum of pathology. Unique aspects of this fellowship include significant exposure to complex primary and revision arthroplasty cases, a strong educational program with teaching and research conferences 3 days per week, and exposure to new technologies including minimally invasive approaches, surgical navigation, alternative bearing surfaces, and investigational studies involving new devices and clinical trials. The UCSF Arthroplasty Service at Parnassus performs over 1250 operative procedures per year, encompassing a balance of simple and complex primary and revision cases.

### Research components

Extensive research opportunities exist in the fellowship, and all fellows are required to prepare one manuscript based upon original research for publication. Opportunities exist for clinical research through the UCSF Arthroplasty Database and the UCSF Orthopaedic Surgery Health Outcomes Center, a multi-disciplinary research center that includes orthopaedic surgeons, epidemiologists, and other health services researchers. Basic science facilities are also available, including bioengineering, biomechanics, and molecular biology laboratories.

### Didactic components

#### UCSF Grand Rounds

Grand rounds are held weekly September through June and cover a variety of orthopaedic topics. Grand Rounds are organized by the UCSF Dept of Orthopaedic Surgery

#### Arthroplasty Weekly Education Conference

Case-based didactic conference covering rotating schedule of arthroplasty topics run by attendings

#### Arthroplasty Service Preop/Postop Conference

Weekly multidisciplinary conference reviewing upcoming surgical cases. Additional time spent reviewing interesting postoperative cases and teaching of reconstruction principles

#### Monthly Journal Club / Complex Case Series

Monthly meeting with faculty, fellows and arthroplasty bound chief residents to discuss the latest practice-changing literature or to review and examine theme-based complex reconstruction cases

#### National Arthroplasty Meeting

Fellowship sponsored travel to one national orthopaedic meeting of the fellows choice

#### Industry Sponsored Courses

Available throughout the year - fellows are encouraged and supported in attending
