

OUR MISSION

OTI Junior Academy is a *one-of-a-kind, virtual community outreach program* that introduces high school students to the healthcare profession. Our mission is to introduce students of diverse and underrepresented socioeconomic and cultural backgrounds to the healthcare field. The program engrosses students in healthcare to develop leaders and healers who in turn will guide and lead their community into a healthy future.

Over the course of 7 weeks, we will introduce the students to different sides of healthcare through: job-shadowing, professional development workshops, community health projects, coding modules, cadaver-based anatomy, and case study.

In addition to the summer program, our students will have the opportunity to participate in our mentorship program during the academic year where they will be paired with alumni mentors who possess first-hand experience navigating through the college application process.
