

San Francisco Trauma Course 2024

# Short Segment Tibial Fractures How to Ensure Reduction

Christian Krettek, Hannover Germany

1

No conflict of interest

Objectives

- Understand problems related to nailing of proximal tibia fxs
- discuss the specific anatomy
- realize the dislocating risk factors
- understand the role of starting point
- Learn about various options how to ensure reduction

2

**Problems**

instability / malalignment

**Proximal**

- Tornetta, CORR 1996
- Henley, JOT 1993
- Ahlers, UCH 1992
- Freedman & Johnson, CORR 1995 up to 58% > 5°

**Midshaft**

Freedman CORR 1995  
7% > 5°

**Distal**

Freedman & Johnson CORR 1995  
8% > 5°  
Robinson JBJS-B 1995  
6% malalignment

M+H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

3

### #1 Understand the Fracture Mechanics & fx Pattern

- Why is understanding of fracture mechanics important?
- Fracture orientation proximal fragment?
- Lateral up – transverse – medial up?
- Implications for deformity?
- Risk for malalignment?

Oblique & wedge fx: higher risk for deformity compared to transverse fx

Lateral up – transverse – medial up?

more toggle

Less toggle

M+H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

4

### #2 Understand Excentric Muscle Distribution

all muscle on the lateral side / posterior valgus / antecurvature deformity

M+H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

5

### #3 Understand Tibia Excentricity and it's implication for Starting point

Tibia excentric bone

Study: retrogradely reamed tibias exit point analysis relative to tibial tubercle

0% 25% 75%

50% medial 50% lateral

Too medial: higher risk for deformity compared to more lateral starting point

M+H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

6

### #4 Understand Tibio-Patellar Topography & its implication for ...

- skin incision & bone starting point
- nail canal
- alignment
- stability

Starting Point lateral view starting point: Oedge starting direction: stay steep

M-H krettek.christian@mh-hannover.de Medizinische Hochschule Hannover

7

### #5 Understand Excentric Bone Distribution

anterior high density

posterior low density

Starting Point lateral view starting point: Oedge starting direction: stay steep

correction posterior to anterior difficult

correction anterior to posterior easy

M-H krettek.christian@mh-hannover.de Medizinische Hochschule Hannover

8

### #5 Understand Excentricity of Shaft Cross Section

skin incision

frame assisted tibia nailing no fracture table

skin incision & starting point in line with medullary cavity

this is what you feel anterior tibial crest

this is what you need center of medullary canal

General Rule in IM Nailing Skin incision ... defines starting point ... starting point defines alignment

M-H krettek.christian@mh-hannover.de Medizinische Hochschule Hannover

9

### Approach

ability for painfree kneeling depends from

- incision length (p=0.007, n=5.139)
- position of nailtip (p=0.013, n=4.463) n=131, FU 12-36 months / Anova (1), Kruskal Wallis, Schandensimer 1999

M-H krettek.christian@mh-hannover.de Medizinische Hochschule Hannover

10

### Approach

options ...

- suprapatellar
- parapatellar
- trans Ligamentous
- ....
- more data needed ...

M-H krettek.christian@mh-hannover.de Medizinische Hochschule Hannover

11

### Instruments

Distractor / temp exfix

Co-linear bone clamp

Schanz-Screws

T-handle

M-H krettek.christian@mh-hannover.de Medizinische Hochschule Hannover

12

**Instruments**  
Ex-Fix Frame

Clothesline technique

"Clothesline technique" for proximal tibial shaft fracture fixation using conventional intramedullary nail:  
William Das, Belangero et al. European Journal of Orthopaedic Surgery & Traumatology (2018)

M4H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

13

**Additional implants**  
nail + Plate

sharing of tasks

plate: translation rotation  
nail: length bending

Nork SE, Barei DP, Schildhauer TA, Agel J, Holt SK, Schrick JL, Sangeorzan BJ (2006) Intramedullary nailing of proximal quarter tibial fractures. J Orthop Trauma 20(8):523-528

M4H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

14

**Additional Implants**  
Poller Screws

Krettek et al (1999) JBIS-B  
Krettek et al (1999) J Orthop Trauma

M4H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

15

**Additional Implants** Surgical Technique  
Poller Screws

temporary nail removal  
Poller screw in old nail path orientation ap C-arm control  
nail insertion  
distal locking + backslap

1. 2. 3. 4.

Krettek et al (1999) JBIS-B

16

**Additional Implants**  
Poller Screws

Krettek et al (1999) JBIS-B  
Krettek et al (1999) J Orthop Trauma

M4H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

17

**3 Problems in metaphyseal tibia fx's with im nailing**

1. diameter discrepancy nail - medullary cavity
2. nail translation along interlocking screws
3. Toggeling due to manufacturing tolerances

plexi-glass model, 8 mm UTN, 3 distal interlocking screws

5°

Krettek et al (1999) JBIS-B  
Krettek et al (1999) J Orthop Trauma

M4H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

18

### Biomechanics: axial load

Poller screws ...  
 reduce diameter discrepancy  
 prevent translation along the screw  
 increase contact area  
 transform shear into compression

Krettek et al (1999) JBJS-B  
 Krettek et al (1999) J Orthop Trauma

M-H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

19

### Poller Screws can ...

- correct & maintain alignment\*  
0% <5° vs 58% >5° (Freedman CORR 1995)
- increase primary stability\*\*  
up to 54%
- enhance ‚nail-ability‘

but ...

- additional radiation
- potential nail damage
- requires knowledge of patho-biomechanics

\*Krettek et al (1999) JBJS-B  
 \*\*Krettek et al (1999) J Orthop Trauma 12 (6) 344

M-H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

20

### When & what can we use as ‚Poller‘ devices?

- before / after nail insertion
- temporary / permanent?
- different diameters
- different stiffness
  - Locking bolts
  - Screws
  - K-wires
  - Nails
  - Cement

### OTA 37<sup>th</sup> Annual Meeting

October 20 - 23, 2021 • Fort Worth, Texas

Saturday, October 23, continued

10:15 AM - **Concurrent Breakout Sessions (cont'd)**

11:15 AM **Tips and Tricks for Getting the Metaphysis Right With Different Implants!**

Moderator: Benjamin Ollivers, MD, MA  
Faculty: Paul Tarnetta III, MD  
Reza Firoozabadi, MD  
J. Tracy Watson, MD

**Learning Objectives**

- Management strategies for complex metadiaphyseal injuries
- Understand different approaches to metadiaphyseal injuries current controversies
- Understand how to optimise outcomes in complex metadiaphyseal injuries

**Description**

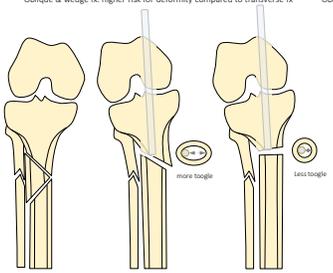

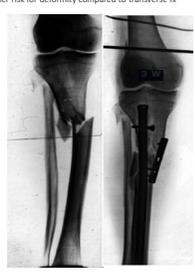

Metaphyseal malalignment is among the most common complication in periarticular injuries. This symposium will cover the technical aspects of contemporary techniques including 'extreme nailing', adjunctive plating, nail-plate constructs and circular frame use. Cases will be used for a discussion of the decision making for complex metaphyseal injuries. Malalignment is common in periarticular injury (5%-25%). These problems can be caused by bad decision making or by technical issues. This session will cover the underlying decision making processes in the key areas of metadiaphyseal trauma to be discussed and understood. The case illustrated discussion session will cover tips and tricks supported by a principles based approach to complex injuries. There have been no similar sessions at the OTA for the past 4 years.

Medizinische Hochschule Hannover

34

### #1 Understand the Fracture Mechanics & fx Pattern

Oblique & wedge fx: higher risk for deformity compared to transverse fx

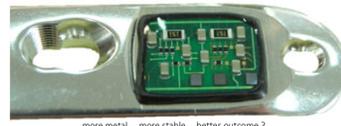

M4H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

35

### Do we need intelligent implants ?

... or ... a more intelligent use of existing implants ?

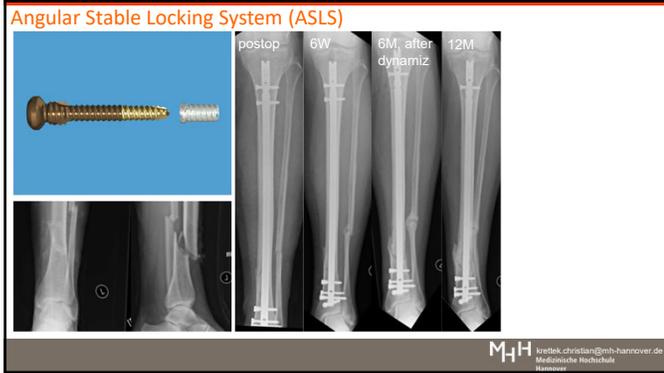

more metal ... more stable ... better outcome ?

M4H krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

36

37

38

**Summary**

1. Overdistraction eases intramedullary nailing
2. Patho-mechanics of IT band and it's role for reduction
3. Double joy stick + C-arm for ,3D'- navigation
4. Through fx retro-grade guide wire placement in obese subtroch fx
5. Implant rotation for small alignment corrections
6. Use of Poller screws for wrong starting point
7. Use of Poller screws for correction of malalignment
8. transosseous cerclage wires
9. role of iPhone in torsional correction
10. Motorized nails for defects /malalignment

39

**risk factors for valgus**

1. excentric bone
2. all muscles lateral
3. bending wedge lack of (lateral) support (most common)

**Study: retrogradely reamed tibiae exit point analysis relativ to tibial tubercle**

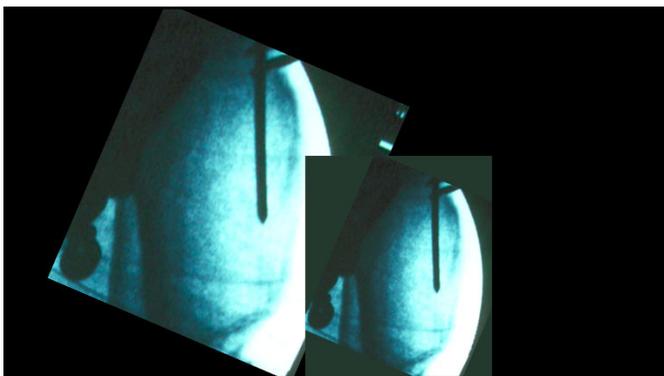

0% 25% 75%

50% medial 50% lateral

Fig. 1  
per end of the tibia, showing the extra-synovial area of bone produced by passing a straight drill upwards along the tibia. Note that it encroaches only on the margin of the lateral articular facet. The black spots indicate suitable points of entry for a medullary nail.

MHH krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

40

41

**Proximal tibia fx**  
Which deformity can you expect?

**Deformity rule:**  
deforms to side of higher fx line or wedge

**example 1:**  
bending wedge lateral  
• valgus deformity  
• most common  
• mostly impact from lateral (car bumper)

**example 2:**  
• no bending wedge  
deforms to the side higher fx line

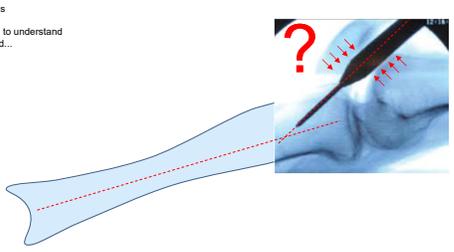

MHH krettek.christian@mh-hannover.de  
Medizinische Hochschule Hannover

42

### Approach

options ...

- suprapatellar
- parapatellar
- trans Ligamentous
- ...
- promising ... hard to understand more data needed...

M+H metak.christian@mh-hannover.de  
Medizinische Hochschule  
Hannover

43

### Toggeling problems also in femoral nailing

internal rotation  
stress +3°

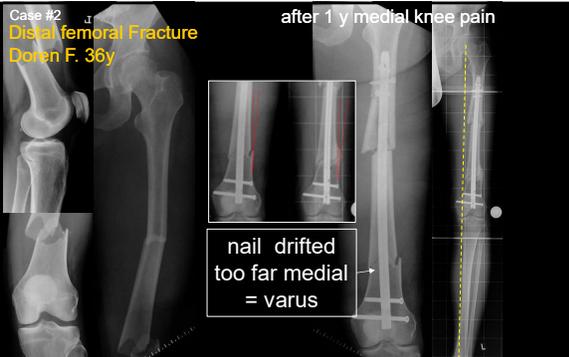

external rotation  
stress -5°

44

Case #2  
Distal femoral Fracture  
Doren F. 36y

after 1 y medial knee pain

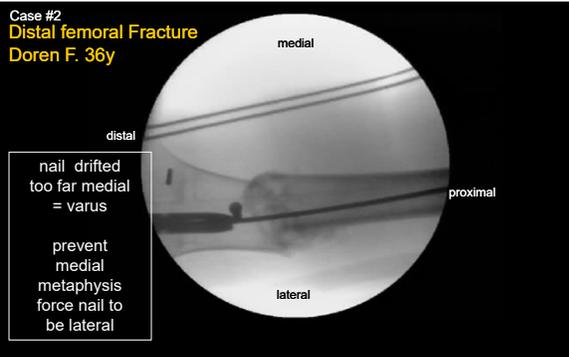

nail drifted too far medial = varus

45

46

Case #2  
Distal femoral Fracture  
Doren F. 36y

nail drifted too far medial = varus

prevent medial metaphysis force nail to be lateral

47
